

WORK EXPERIENCE

JP Morgan Chase, Jersey City, NJ – Software Engineer III

Oct 2025 - Present

- Led modernization of Domestic Inbound Market Cash Payments, migrating legacy DBNK systems to AME to support 5K+ daily high-value transactions totaling \$40B+ processed per day. Increased straight-through processing (STP) match rates by 20–30% by redesigning core matching logic, and modernized the testing framework by migrating from FitNesse to Cucumber BDD tests
- Developed a full-featured JetBrains IDE plugin designed to help developers craft well-structured, high-quality AI prompts and automate the prompting process, driving measurable productivity gains including 85% faster prompt engineering, 2x improvement in AI response quality, and 80% fewer context switches, with cross-IDE support across all JetBrains platforms
- Headed software creation of USM and Kafka converting and processing aspect of UBM converter with Spring Boot, automating end-to-end conversion and publishing pipelines for 1.5M+ historical transactions and 10K+ daily transactions, leveraging multithreading and SQL flushing and clearing to dramatically reduce processing time by 150x, ensuring the system could reliably scale to meet high-volume transaction throughput demands
- Pursued self-development primarily in Machine Learning field leveraging corporate resources and hands-on training

Bank of America, Pennington, NJ – Software Engineer

Jul 2024 – Sept 2025

- Headed process of upgrading internal codebase from Java Springboot 2 to Springboot 3, upgrading dozens of depreciated jars, reducing high risk security vulnerabilities in codebase and jars down by 90%
- Spearheaded the evaluation and pilot testing of AI development tools such as GitHub Copilot, achieving a 25% reduction in boilerplate coding time and a 15% increase in code review efficiency
- Led the research and development process of incorporating behavioral testing through Cucumber into team's software, introducing proactive end-to-end testing, decreasing code logical error rate by over 50% and improving communication between our team and stakeholders
- Utilized GitHub Copilot to resolve over 90% of SonarQube vulnerabilities and issues, increasing code readability, manageability, and simplicity while showcasing the power of generative AI to team
- Actively pursued self-development in artificial intelligence, cloud architecture, and engineering, completing advanced training in AWS, Python, containerization, and hands-on ML

Bank of America, Pennington, NJ – Software Engineer Intern

Jun 2023 – Aug 2023

- Created, tested, and maintained retail bill payment services with a priority of increasing internal efficiencies
- Collaborated with testing team to develop enhanced user interface for testing API calls and bill payment backend, reducing testing times by over 20%, leveraging Angular, Typescript, Java Spring Boot
- Developed JUnit tests to exam key files for any code issues and conciseness, raising overall testing coverage to over 90% for multiple classes and packages
- Created API mapping documentation, mapping the API requests and responses to the relevant SQL tables and columns

EDUCATION

New York University, New York, NY

Sep 2021 – May 2024

- **BS | Computer Science** major | **Math** minor | GPA: **3.962 / 4.0** | Summa Cum Laude | Honors Scholar | Dean's List
- Relevant Coursework: *Operating Systems, Databases, Applied Internet Tech, Computer Architecture, Object Oriented Programming, Data Structures and Algorithms, Artificial Intelligence, Software Engineering, Quantum Computing*

PROJECTS

Crumbleless, Guided Personal Project – [Github](#)

Dec 2023 – May 2024

- Created Full-Stack application with NYU Professor Arfaoui's guidance to reduce food waste for home cooks by formulating personalized dish recipes and meal plans based on user's available ingredients and interests
- Leveraged Python Flask and ReactJS to enable a more flexible and expandable framework for web application

NYU hAQathon, New York, NY – Energy SPECTator Project – Lead Software Developer – [Github](#)

Sep 2023

- Finalist for the hackathon to fulfill a sustainability goal using AI and Quantum Computing
- Utilized and simulated the Quantum VQL algorithm along with Quantum Spectral Graph techniques to analyze data and optimize locations for creation of renewable technology, e.g., wind farms

SKILLS

Languages: C++, C#, C, Python, Javascript, Java, HTML, CSS, Kotlin, Arduino, SQL, Intel x86 (Assembly)

- Programs/Frameworks: MongoDB, React, NodeJS, Spring Boot, Github, Flask, MySQL, Angular, Copilot
